

Modular design for maximum flexibility

The principle is a simple one – and the result is impressive: Our new modular-design lugged infeed systems permit flexible application and fast resetting.

With the basic unit, you are investing in unlimited scope for future upgrading: the wide range of available extension modules allows you to upgrade or convert your setup to cope with a wide

variety of different tasks. This versatility means that even products which are difficult to manage, such as promotional articles, can be successfully collated and packaged.

Facts and figures

Technical data

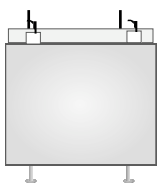

MGZ 400

Maximum product width	Up to 20"
Flight spacing	12" - 48"
Flight height	Maximum 6"
Length of chain conveyor	79"
Frequency controlled drive with overload protection	Standard feature
Chain conveyor with photocell for starting position	Standard feature
Own power supply	Standard feature
Double lug version on request	

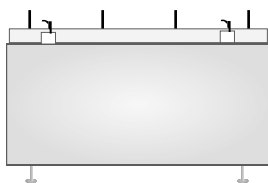

Non-standard equipment features

- Extension module for 1 additional work/feeding station
- Extension module for 2 additional work/feeding stations
- Inline module for automatic product feeding
- Indexing module for optimum product release into the inline module
- Mounting console for vacuum feeder (feeder itself not included)
- Mounting console for vacuum rotation feeder (feeder itself not included)
- Opening sword for books, etc., with controlled air jet
- Magazine for books, CD's, DVD's and other solid products

Modular Lug Infeed System

MGZ 400

Kallfass is another step closer to perfecting your packaging process with our new flight lug conveyor. With its versatile application possibilities, the MGZ makes an invaluable contribution towards optimization of your new or existing packaging machinery.

The MGZ 400 is the ideal feeding unit for packaging books, brochures, magazines, software boxes, CDs and

similar items – also in stacks. Using a lugged infeed system will enhance the efficiency of your entire production line. And, the units can be reconfigured to tackle new tasks with only a minimum of delay: a distinct advantage for everyone from contract packaging firms to bookbinders, and more.

Equipped with its own power supply and casters, the MGZ can be quickly and simply combined with a wide range

of different packaging machines which have their own independent indexed product infeed system. This includes the fully automatic side sealer UNIVERSA 400 ST.

Particular attention was paid in the conveyor design to ensure maximum working safety for manual feeding stations, as well as to potential application in workshops for the disabled.
