

High Resolution Printing

for the **Real World**

The **ProSeries** and **ClassicSeries** from **FoxJet** are designed for printing in real world factory environments. They deliver the reliable 24/7 automation that today's packaging lines demand. An integrated design encloses the ink system, printhead assembly, and fluids in a rugged anodized aluminum enclosure for simplified operation. The innovative design greatly reduces the effects of shock and vibration making it the most reliable case printing system in the world.

Front View

Design Features -

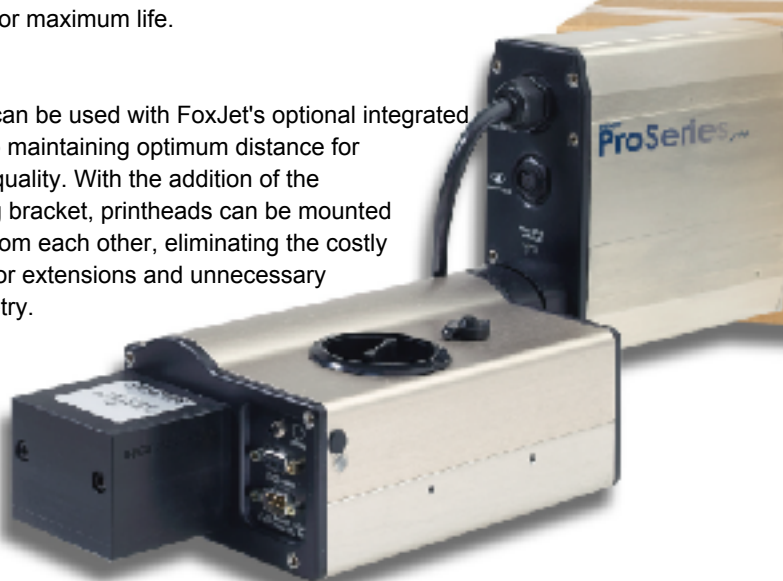

- * An enhanced industrial mechanical design encloses the **new** printheads, ink system, and ink tubes in one enclosure, improving shock resistance.
- * Dual ink feed improves flow rates for faster printing speeds and smooth ink delivery.
- * Single step prime / purge method is automatic with the improved APS technology. The recirculating system virtually eliminates messy priming procedures.
- * An ink channel barrier membrane within the sealed printhead housing shields the printhead and protects printhead electronics from ink intrusion, increasing product reliability and prolonging the life of the printhead. All **ProSeries** printheads are cleanable and repairable for maximum life.

New Brackets

Versatility

The **ProSeries** can be used with FoxJet's optional integrated spring bracket to maintaining optimum distance for consistent print quality. With the addition of the integrated spring bracket, printheads can be mounted directly across from each other, eliminating the costly need for conveyor extensions and unnecessary mounting bracketry.
